BELGIUM – WALLONIA

THE REGION

Wallonia is the southern part of Belgium.

Its location in the heart of Europe makes it the ideal place to settle a business to conquer the European market.

- Within less than 3 hour drive from Frankfurt
- About 5 hours to reach London by truck,
4 hours to Paris

Population of 3.6 million inhabitants

5 major Universities, numerous high schools
and specialized agrifood research centres

THE AGRICULTURAL SECTOR IN WALLONIA - FACTS & FIGURES

Wallonia's agriculture sector is a key pillar of the economy, occupying a large part of its ground

- 44% of the surface of Wallonia is dedicated to agriculture
- 738 927 hectares of agricultural area
- Agricultural land is well distributed across the region: grassland is to be found mainly in the South and East of the region, where dairy farming and beef rearing is concentrated
- Main crops: permanent grassland, cereals (winter wheat, barley,...), forage crops, industrial crops (sugar beets, potatoes,...)
- Main livestock: dairy cows, beef cattle, pigs, poultry

THE BEST PLACE FOR AGRI & FOOD TECH AND INNOVATION

- An ideal playground to test agri innovation (fields, farms, applied research centres,...)
- A dense network of R&D centres, universities and high schools specialised in agri & food tech
- Trained workers in agriculture and food production
- Favorable tax environment & R&D incentives
- Space and buildings adapted for your business
- A state-of-the-art logistic hub at Liege-Airport to export fresh products all over the world in the blink of an eye
- Numerous incentives (investment, R&D, employment and export) for investors
- A welcoming business environment: setting up a business in Belgium is quick and simple. It only takes 4 days and 4 start-up procedures to take off, making Belgium one of the fastest places in Europe to establish a business

WALLONIA EXPORT & INVESTMENT AGENCY

You have a project, a plan to invest in Europe?

Receive effective help from AWEX – Wallonia Export & Investment Agency.

The Wallonia Export and Investment Agency provides information, advice, contacts and solutions to foreign companies considering expanding business in Southern Belgium

- Services are free of charge
- Working in close connections with a large network, including the Belgian Embassies and Walloon Administration

Support in setting up a business:

- Site selection and tailor-made site visits
- Information about all tax benefits, financial grants and incentives
- Information about legal aspects of setting up business
- Introduction to the local decision makers
- Integration into the local community and professional networks

Eric LEJEUNE
Business Developer Agrifood
e.lejeune@awex.be

Located in the heart of Europe, Wallonia (part of Belgium), is a high potential and strategic region for business located at 55 kilometers from the capital, Brussels. Especially in the agri-food area, the largest industrial sector of the country has build-up a strong innovative ecosystem which stimulates growth in export and turnover as well as investment and attraction of foreign investors.

For a few years, global companies chose to set-up subsidiaries and/or forge partnerships with local actors.

WAGRALIM: YOUR INNOVATION PARTNER

WAGRALIM

Wagralim, established in 2006 as a non-profit organization, serves as the leading Agri-Food Innovation Cluster in Wallonia. Representing a network of 275 members, including agri-food businesses, equipment and service providers, and research and training institutions, our mission is to foster innovation and collaboration within the food ecosystem. We aim to support stakeholders in their journey towards responsible development and sustainable transformation.

Dedicated to building a resilient, innovative, and sustainable food system, Wagralim addresses the entire value chain, from farm to fork. We support our members at every stage, from idea conception to research and development and product formulation. Additionally, Wagralim actively encourages and enables local agri-food SMEs to engage in international activities and participate in European initiatives, promoting their growth and global integration.

Are you a foreign company looking to invest in Europe or establish an operational presence? Wallonia offers an ideal environment with easy logistical access to major European markets, robust support for research and development, and a rich reservoir of academic knowledge and expertise. Partnering with Wagralim means positioning yourself at the heart of Europe's agri-food industry, integrating into a dynamic and thriving ecosystem, ensuring you become part of a vibrant network that drives innovation and success.

IIS DIGIBIOCONTROL

Within the framework of the European Smart Specialisation Strategy (S3), Wallonia has identified five Strategic Activity Domains (DIS). The innovation initiative Digibiocontrol has been recognized and labeled under DIS n°5, which focuses on Agri-Food Chains of the Future and Innovative Management of the Environment. Digibiocontrol uniquely mobilizes the expertise of regional ecosystems in biocontrol and digital technologies (such as decision support tools, sensors, robots, etc.) to overcome the challenges currently hindering the broader adoption of biocontrol solutions in agriculture. Currently, 69 partners from both private and public sectors are actively involved in this initiative.

The IIS Digibiocontrol specifically aims to enhance skills and improve collaboration among its members to advance several major objectives: developing and bringing new products to market, accelerating the agroecological transition through digital technologies, supporting the creation of new companies, and promoting training for both current and future users and sales professionals.

WALLONIA'S INNOVATION INITIATIVES

IIS WASABI 2.0

The IIS - Initiative for Strategic Innovation - Wasabi 2.0 aims to invigorate the Walloon's horticultural agri-food sector in both rural and (peri-)urban areas, focusing on the development of fruits, vegetables, and low-feed-conversion animals such as fish, poultry, and insects. This initiative is designed to be innovative, sustainable, and resilient, addressing the underdevelopment of these subsectors through a collaborative approach among ecosystem partners, encompassing all stages of the agri-food value chain, including upstream and downstream activities such as production, processing, and distribution.

The initiative is structured around four core areas: Training, Research and Innovation, Enterprise Development, Urban and Rural Deployment. The key focus is on research and innovation, which is crucial for advancing technological readiness levels (TRLs) and fostering international collaboration. This focus is intended to strengthen global partnerships and enhance the initiative's impact on a global scale.

By promoting sustainable practices, circular economy principles, and local supply chains, the initiative supports small and medium-sized enterprises (SMEs) in producing high-quality, eco-friendly products. A central mission of IIS Wasabi 2.0 is to drive internationalization, providing opportunities for global collaboration and expanding the initiative's reach and influence.

ADVAGREEN is a Walloon company specialized in the development, the production and the distribution of plants' nutritional and bio stimulating products based on the CLEAN FERTILIZER Technology.

The CLEAN FERTILIZER Technology relies on a patented manufacturing process of "methylen-urea", which permits to propose "Nitrate Free" liquid fertilizers and biostimulants. CLEAN FERTILIZER Technology responds to the requirements for a sustainable agriculture, by insuring no losses of nitrogen (98% of nitrogen assimilation), while providing a lasting feeding to the crops. The high care in the choice of the raw materials and the know-how in the formulation process ensure that CLEAN FERTILIZER is totally safe for the treated vegetal.

Since more than 15 years, ADVAGREEN tested the CLEAN FERTILIZER Technology and has demonstrated it can integrate any fertilization program and that, CLEAN FERTILIZER Technology permits to decrease the total nitrogen applied in the field, securing yield and quality to the crops.

**agricells.com****AGRICELLS**

Rue de la Science, 8
6900 Aye
BELGIUM

Co-founded in 2020, by two Biotech & Pharma professionals, AGRICELLS is an innovative Belgian company dedicated to sustainable agriculture.

Agricells aims to promote a world oriented towards healthier and sustainable food for everyone. Agricells develops and markets innovative, affordable, and accessible biostimulants and biocontrol solutions based on micro-organisms allowing the reduction of chemical inputs in the agricultural sector.

Since our launch, we have carried out intensive laboratory and field trials across Europe with the help of independent organizations. This rigorous approach has enabled us to understand how plants react to different stresses. From climatic conditions to nutritional deficiencies, Agricells offers a range of products for maximizing yields on several types of crops while controlling pathogens development.

At Agricells, with innovation at the heart of our strategy, we are actively advancing our research and development phase to develop innovative COMBO solutions based on our proprietary bacteria. Therefore, in the coming years, we will also be introducing next generation biofungicides, bioelicitors, bioinsecticides, and biostimulants to the market.

Our multidisciplinary team covers a broad spectrum, from advanced research to products commercialization.

**apeosolutions.com****APEO**

Passage des Déportés, 2
5030 Gembloux
BELGIUM

At APEO, we are driven by a mission to transform the agricultural landscape, promoting a shift towards sustainable gardening and agriculture through innovative Bioherbicides, Biofungicides and biocides, founded on science.

Our products are based on natural essential oils and botanical extracts, and act as efficient 100% organic Biopesticides. A first portfolio of biological herbicides and biocides is developed, targeting Home & Garden markets.

APEO's first customers are the suppliers of H&G and DIY retailers. These suppliers offer a wide range of gardening products, from substrates, tools, to plant protection products. APEO will provide them with a complement to their portfolio.

APEO second commercial development will aim suppliers of professional crop and non-crop (including ornamentals, landscaping, infrastructures...) distribution, with Bioherbicides and Biofungicides.

beeodiversity.com

BEEODIVERSITY SRL

Rue du Bosquet, 3
1400 Nivelles
BELGIUM

AGRICULTURE

Established in 2012, BeeOdiversity is a nature-tech company which empowers companies and public entities to create value through biodiversity regeneration and pollution reduction. Our offering is structured around consulting services and state-of-the-art, nature-based monitoring solutions to allow data-driven actions on the ground.

MONITORING & REPORTING / AGRICULTURAL POLLUTANTS / BIODIVERSITY /
SOIL HEALTH / CSRD – TAXONOMY – TNFD – SBTN – SAI PLATFORM

REGEN AG PERFORMANCE / IMPACT MONITORING

Combining our monitoring and reporting tool and experience, we are able to measure the impact and / or performance of regen ag practices, following by example the SAI Platform framework outcomes. This can be done through several tools going from multi-site level to territorial level and then finally parcel level monitoring and data collection.

Target: All farm practices

Status: Sold in several countries around the world

Market: Global

BEEOIMPACT

AI-powered SaaS platform for remotely assessing the exposure of an infinite number of sites to pesticide-related risks, and identifying biodiversity-related risks and opportunities.

Target: All farm practices

Status: Sold in several countries around the world

Market: Europe & USA

BEEOMONITORING

Covering 700ha, this scientifically-validated and non-intrusive solution enables the measure of plant diversity and agricultural pollution including 500+ pesticides, PFAS, heavy metals, fertilizers, nitrates, etc, via the analysis of pollen collected by bees

Target: All farm practices

Status: Sold in several countries around the world

Market: Global

BEEOMETRICS

Covering 40ha, this scientifically designed monitoring device provides an assessment of the environmental health of a parcel through the monitoring of wild bees, plant diversity, pollution

Target: All farm practices

Status: Sold in several countries around the world

Market: Europe & USA

BEEOEDNA

Analysis of soil eDNA from samples collected on site to identify soil biodiversity (fungi, bacteria etc.) and soil functionalities (water infiltration and retention, carbon sequestration, nutrients availability for plants, diseases etc.) to assess the performance of agricultural practices.

Target: All farm practices

Status: Sold in several countries around the world

Market: Global

**proxani.eu****DUMOULIN SRL**

Rue Bourie, 18
5300 Andenne
BELGIUM

At Proxani, we are animal nutrition experts: backed up by over 120 years of feed experience via our parent company Arvesta.

Arvesta is the market leader in Belgium in animal feed, agri- and horticulture supplies and retail, the latter focusing on hobby feeds, home baking, cooking and gardening.

Proxani produces and markets professional feeds for dairy cows, beef cattle, calves, goats and sheep, horses, pigs, poultry and petfood.

We are also highly experienced in the production and marketing of extruded linseed and rapeseed products under the brand names NUTEX, NUTEX SWEET and COLMEX. Benefits include Omega-3 enrichment of eggs, meat and milk, improved fertility, reduced emission of methane, energy concentration of the ration and improved protein utilization.

Proxani specialty products are marketed via an international network of distributors in over 25 countries. We are continuously looking for new partnerships in Asia, Africa and Latin-America.

& GREEN SPACES

PUR VER is a company specialised in the production of high-quality worm compost (vermicompost), using a process based exclusively on plant-based raw materials that guarantees consistent quality throughout the year.

PUR VER has also developed a liquid product with the same characteristics as its solid vermicompost, but with the added bonus of being easy to use. These two products help plants to grow, thanks in particular to stronger, more abundant roots, and regenerate the soil thanks to their humic acid and micro-organism content. These are natural products that can be used with all plants, for both private individuals and professionals.

BELGIUM

HOME & GARDEN

AGRICULTURE

Redebel Regulatory Affairs (RRA) offers the entire range of services of the registration process in EU and abroad for Active Substances and Formulations of the plant protection products – PPP (EC) No 1107/2009, Biostimulants (National and (EU) No 2019/1009) Biocides (EU) No 528/2012 and chemicals substances (REACH) (EC) No 1907/2006.

PLANT PROTECTION PRODUCT

RRA is managing active substance approvals and renewals and product registrations for bio-sourced plant protection products in Europe and beyond. We support our clients concerning the study design, monitoring, dossier preparation and risk assessment for microorganisms and botanicals. In the meantime, we ensure an optimal follow-up of the evaluation process thanks to our excellent network of contacts among EU and Member States competent authorities

Target: Plant protection products manufacturers/suppliers

Targeted crop: All Major Crops, Vegetables, Fruits, Ornamental,...

Status: Before their products approvals/renewals

Market: The plant protection products manufacturers/suppliers can come from any country from all the Continents. Their targeted markets can be European Union countries, UK and even beyond.

BIOSTIMULANT AND FERTILIZER

RRA is offering strategic analysis for fertilizers and biostimulants registration possibilities following the Regulation (EU) 2019/1009 or each 27 Member states national rules. We support our clients by making stewardship for pre-application, drafting technical files and administrative documents, monitoring of laboratory analyses, assisting in setting up efficacy trials, submitting of the registration dossier to relevant authorities, efficient monitoring of the evaluation process and interacting with relevant authorities.

Target: Biostimulants and fertilizers manufacturers/suppliers

Targeted crop: All Major Crops, Vegetables, Fruits, Ornamental, ... indoor plants

Status: Before their products approvals/renewals

Market: The biostimulants/fertilizers manufacturers/suppliers can come from any country from all the Continents. Their targeted markets can be European Union countries, UK and even beyond.

**toopi-organics.com****TOOPI ORGANICS**

Rue aux Halies, 14
33190 Loupiac de la Réole
FRANCE

Toopi Organics is an innovative biotechnology company that repurposes human urine into biostimulants for agriculture. Through a patented process, it transforms this untapped resource into sustainable solutions, helping to reduce the use of chemical fertilizers while improving soil health.

The company collects urine through partnerships with festivals, highway rest areas, and tourist sites, contributing to water conservation and reducing wastewater pollution.

With expansion plans in France and Belgium, Toopi Organics aims to process over 2 million liters of urine by 2027. Its circular and innovative model aligns with both ecological and economic sustainability, proving that today's waste can become tomorrow's resource.
